Acceptable Use Policy

Purpose

This Acceptable Use Policy (AUP) defines appropriate use of company-owned computing resources, networks, and accounts, to protect employees, customers, and the company from the consequences of misuse.

Permitted Use

Company systems are provided primarily for business purposes. Limited personal use is permitted provided it does not interfere with work duties, consume excessive resources, or violate any other company policy.

Prohibited Activities

Employees may not use company systems to: access or distribute illegal content; harass or discriminate against others; install unlicensed or unauthorized software; attempt to bypass security controls; or use company resources for an outside business without written approval.

Software and Devices

Only software approved by IT may be installed on company-managed devices. Personal devices used to access company data must comply with the BYOD Policy.

Monitoring

The company may monitor use of its networks and systems to the extent permitted by law, for the purposes of security, legal compliance, and system maintenance. Employees should have no expectation of privacy in communications made on company systems.

Enforcement

Violations of this policy may result in loss of system access, disciplinary action, or termination, depending on severity.
