

Nimbus Cloud Technologies

Bring Your Own Device (BYOD) Policy

Purpose

Nimbus Cloud Technologies allows employees to use personal mobile devices to access approved company systems, such as email and chat, for convenience. This policy sets the security requirements for doing so.

Enrollment

Personal devices must be enrolled in the company's mobile device management (MDM) solution before they can access company email, chat, or documents. Enrollment applies only to a managed work profile; personal apps and data on the device are not accessed or controlled by the company.

Security Requirements

Enrolled devices must use a screen lock (PIN, password, or biometric), have device encryption enabled, and keep the operating system on a supported, patched version. Jailbroken or rooted devices may not be enrolled.

Lost or Stolen Devices

A lost or stolen device that is enrolled in the MDM must be reported to IT immediately so the company work profile can be remotely wiped. This does not affect personal data outside the managed work profile.

Prohibited Data

Highly sensitive data, such as production database credentials or unencrypted customer payment data, may not be stored on personal devices under any circumstances.

Offboarding

When an employee leaves the company, the managed work profile is remotely wiped from any enrolled personal devices as part of the standard offboarding checklist.
