

Nimbus Cloud Technologies

Data Privacy Policy

Purpose

Nimbus Cloud Technologies collects and processes personal data from customers, employees, and website visitors. This policy describes the principles the company follows to protect that data and comply with applicable privacy laws, including GDPR and the CCPA.

Data Minimization

The company collects only the personal data necessary for a specific, disclosed purpose, and retains it only for as long as that purpose requires, in line with the Data Retention and Backup Policy.

Lawful Basis for Processing

Personal data is processed only where the company has a lawful basis to do so: consent, contractual necessity, legal obligation, or legitimate interest. Consent requests are presented in clear, plain language and can be withdrawn at any time.

Data Subject Rights

Individuals may request access to, correction of, deletion of, or a portable copy of their personal data by emailing privacy@nimbuscloud.example. Requests are acknowledged within 5 business days and fulfilled within 30 days, consistent with GDPR and CCPA timelines.

Third-Party Processors

Any third party that processes personal data on the company's behalf must sign a Data Processing Agreement (DPA) and undergo a security review consistent with the Vendor and Third-Party Risk Management Policy before onboarding.

International Transfers

Personal data transferred outside the country of origin is protected using Standard Contractual Clauses (SCCs) or an equivalent, legally recognized safeguard.

Breach Notification

A suspected personal data breach is escalated to the security team immediately and handled under the Incident Response Policy. Where required by law, affected individuals and regulators are notified within 72 hours of the company becoming aware of the breach.

Enforcement

Employees who mishandle personal data, including sharing it outside approved systems, are subject to disciplinary action up to and including termination.
