Data Retention and Backup Policy

Purpose

This policy defines how long different categories of company and customer data are retained, and how that data is backed up, to balance business need, legal obligation, and data minimization.

Retention Schedule

Customer account data is retained for the duration of the customer relationship plus 90 days after account closure, unless a longer period is required by law. Financial and tax records are retained for 7 years. Employee records are retained for the duration of employment plus 7 years. Security and access logs are retained for 12 months.

Backup Requirements

Production databases are backed up continuously with point-in-time recovery available for the preceding 35 days, in addition to daily snapshots retained for 90 days. Backups are encrypted and stored in a separate cloud region from the primary system.

Backup Testing

Backup restoration is tested quarterly to confirm data can be recovered within the recovery time objective (RTO) of 4 hours and recovery point objective (RPO) of 1 hour for production systems.

Secure Deletion

When a retention period expires, data is deleted using a method that renders it unrecoverable, and deletion is logged for audit purposes.

Legal Holds

Data subject to a litigation hold or regulatory investigation is preserved beyond its normal retention period until legal confirms the hold has been lifted.
