

# Nimbus Cloud Technologies

## Information Security Policy

### Purpose

Nimbus Cloud Technologies depends on the confidentiality, integrity, and availability of its information systems to serve customers and operate the business. This policy defines the minimum security controls required to protect company and customer data from unauthorized access, disclosure, alteration, or destruction.

### Scope

This policy applies to all employees, contractors, and interns, and to all systems, applications, and data owned, managed, or processed by the company, whether hosted on-premises or in the cloud.

### Access Control

Access to production systems is granted on a least-privilege basis and must be approved by the relevant system owner. Multi-factor authentication (MFA) is mandatory for all access to production environments, source code repositories, and cloud infrastructure consoles. Access reviews are conducted quarterly, and access is revoked within 24 hours of an employee's termination or role change.

### Password Requirements

Passwords must be at least 14 characters long, unique per system, and stored only in the company-approved password manager. Shared credentials for individual accounts are prohibited. Service account credentials must be rotated at least every 90 days.

### Encryption

All customer data must be encrypted at rest using AES-256 or an equivalent standard, and in transit using TLS 1.2 or higher. Laptops issued to employees must have full-disk encryption enabled before they are allowed to connect to company systems.

### Vulnerability Management

Critical vulnerabilities in production systems must be remediated within 7 days of disclosure; high-severity vulnerabilities within 30 days. Automated dependency and container scanning runs on every build in the CI pipeline, and any build with a critical finding is blocked from deployment.

### Security Awareness Training

All employees must complete security awareness training within 30 days of joining and annually thereafter. Engineering staff additionally complete secure coding training covering the OWASP Top 10.

### Enforcement

Violations of this policy may result in disciplinary action up to and including termination, and may be reported to law enforcement where required by law. Employees who identify a security weakness should report it immediately to [security@nimbuscloud.example](mailto:security@nimbuscloud.example) rather than attempting to exploit or publicize it.
