

Nimbus Cloud Technologies

Remote Work Policy

Purpose

Nimbus Cloud Technologies supports flexible, remote, and hybrid work arrangements. This policy sets expectations for employees working outside a company office so that security, collaboration, and performance standards are maintained.

Eligibility

Remote work eligibility is determined by role and is agreed with the employee's manager. Fully remote, hybrid, and office-based arrangements are all supported depending on team needs.

Equipment and Connectivity

The company provides a laptop and, where needed, a stipend toward home internet and ergonomic equipment. Employees must connect to company systems using the company VPN or zero-trust access client, never over untrusted public Wi-Fi without it.

Core Collaboration Hours

Remote employees are expected to be reachable during a set of core hours agreed with their team, to support meetings and cross-team collaboration across time zones.

Physical Security

Employees working remotely must ensure company devices and any physical documents containing confidential or customer information are not accessible to other members of the household or the public, and must lock devices when unattended.

Performance Expectations

Remote work does not change performance expectations. Managers evaluate output and outcomes rather than hours logged, consistent with the company's standard performance review process.

Enforcement

Repeated failure to meet security or collaboration expectations while working remotely may result in a requirement to work from a company office, or disciplinary action.
